

Big Rock Exploration AB applies for its fourth exploration permit for gold, silver, copper, lead, zinc and iron.

**The following levels of measured from slag heaps within the exploration permit, Silver 205 ppm, gold 1.26 ppm, copper 0.43%, iron 28.3%, lead 4.06%, zinc 7.04%. (source SGU)**

The exploration permit that the company has applied for is located in Ludvika municipality, Dalarna. The area "Rostberget" extends over an area of 37.5 hectares.

The company planned to perform geophysical surveys to be able to determine the area's potential.

The surveys will begin as soon as the exploration permit has been granted.

#### **CEO Alexander Andersson Comment**

"The company has now identified a fourth interesting exploration permit in a short time, and we hope for a quick process to get started with the work in this interesting area."
